Temperature monitoring solution

Temperature monitoring

A monitoring and traceability solution for temperature and other parameters, the 3rd Labguard generation incorporates the totally new web technology-based software, eviSENSE, as well as state-of-the-art hardware. Allowing wireless or wired transmission, the solution enables ease-of-use and flexibility. Based on results from more than 15 years experience and feedback from 4000 installation worldwide, eviSENSE software is available in different versions to suit all users. The solution incorporates advanced alarm features with duty schedule monitoring and traceability needs, climatic chamber mapping and calibration management..
